ISSUE:

An agreement with Google to provide Web Security Services

SYNOPSIS:

The City is currently using a web security appliance to provide these services. The appliance is at end of life and needs to be replaced. The cost for replacement is about \$100,000 plus an annual maintenance contract. Google provides a superior product for less money and all web services would be provided by a single vendor that is a leader in the industry.

BACKGROUND:

Google Web Security for Enterprise, powered by Postini, will protect West Valley City against web malware attacks and enables the safe, productive use of the web, without incurring hardware costs. It will protect all users, whether they are connected directly to the City's network, working remotely in public safety vehicles or at home.

In addition, Google Web Security for Enterprise enables the City to control how employees use the internet, providing easy-to-use tools to create, enforce, and monitor the right web policy for City employees

RECOMMENDATION:

City staff recommends approval of this contract.
